## EXPERIENCE

**Zhejiang Lab**, Hangzhou, Zhejiang

Senior Research Scientist in Center for Intelligent Computing

Jul 2022 – Present

## EDUCATION

**Columbia University**, New York, New York

Ph.D. in Materials Science

Jan 2017 – Oct 2021

- Advisor: Professor Chris Marianetti
- Research Focus: Generic first-principle computation on phonons and phonon-phonon interactions
- Thesis: Thermodynamics of Interacting Phonons

**Columbia University**, New York, New York

Master of Science in Materials Science

Sep 2015 – Dec 2016

- Cumulative GPA: 3.81 / 4.00
- Coursework: Solid State Physics, Computing Electronic Structure of Complex Materials, Theory of Crystalline Materials, Mechanical Behavior of Materials, etc.

**University of Science and Technology Beijing**, Beijing, China

Bachelor of Engineering in Materials Physics

Sep 2011 – Jun 2015

- Adviser: Professor Jiao Teng
- Thesis: Research on the Quantum Transport Properties of Resistive RAM
- Cumulative GPA: 3.46 / 4.00

## RESEARCH

**Columbia University**, New York, New York

Department of Applied Physics and Applied Mathematics

May 2016 – Oct 2021

- Project: Thermodynamics of interacting phonons
- Adviser: Professor Chris Marianetti
- Develop group theoretical approach to extract arbitrary order phonons and their interactions in terms of space group *irreducible derivatives*.
- Develop finite difference algorithm which extracts all irreducible derivatives in the smallest possible supercells with the fewest possible calculations.
- Develop software to compute thermal dynamic properties using the extracted phonon interaction data.
- Perform high-throughput computations on HPC clusters.
- Manage an in-house cluster of more than 80 nodes.

**University of Science and Technology Beijing**, Beijing, China

Undergraduate Thesis, Department of Materials Physics and Chemistry

Feb 2015 – Jun 2015

- Project: Research on the Quantum Transport Properties of Resistive RAM
- Adviser: Professor Jiao Teng
- Design the synthesis process and the pattern of ReRAM thin film. Realized the resistive switch phenomenon in ReRAM.
- Research on the theoretical background of ReRAM and the mechanism and conditions for the Quantized Anisotropic Magnetoresistance.
- Study the resistive switch properties and electron transport properties of the ReRAM samples.

Undergraduate Student Research, Institute for Advanced Materials and Technology      Oct 2013 – May 2014

- Project: Research on the Performance Study of One-dimensional IrO<sub>2</sub> Nano-Array Electrochemical Sensor
- Adviser: Professor Huimin Meng
- Develop a new method of the synthesis of the one-dimensional IrO<sub>2</sub> nanometer array electrodes and studied electrochemistry properties of the electrode.

## SKILLS

- Programming Languages: Proficient in Python, C/C++, Familiar with Objective-C, Java, C#, Fortran.
- First-principle Computation: VASP, Quantum ESSRESSO, Abinit.

- Other Softwares:  $\text{\LaTeX}$ , Docker, MATLAB, Mathematica, Blender, Adobe Photoshop.

## RESEARCH INTERESTS

First-principle computation and simulation; Computational materials science; Phonon and phonon interactions; Materials thermodynamics and thermal transport; Condensed matter physics.
